

PigCHAMP › Mobile App

Proven. Premier. PigCHAMP.

The PigCHAMP Mobile Application allows for remote data entry of PigCHAMP Reproductive information while providing reporting functionality and validation to users. This phone or tablet app directly interacts with PigCHAMP Online via an internet connection.

All of the data you would generally record in the PigCHAMP desktop application can now be easily entered into the PigCHAMP Mobile App and synced with PigOnline. This gives you the convenience of not just data entry in real-time, but also reports such as active animal lists, sows due for attention, and more.

Active Animals List			
1561 pig(s) in herd (Any Active Status)
